

MEETING RECAP

Date: March 16, 2026

Format: Microsoft Teams — Video Call

Attendee	Organization	Role Context
Gerard Maclellan	Greenshield	IT Leadership
Matias Adan	Greenshield	Endpoint / App Deployment
Aaron Adsit	Recast Software	VP, Partnerships & Alliances
Benoit Lecours	System Center Dudes	Implementation Partner

Summary

Follow-up session after both Gerard and Matias reviewed the Application Workspace webinar. The team discussed Greenshield's current environment, migration priorities (SCCM → Intune, Citrix → AVD), and how Application Workspace could support those transitions. Both teams agreed to schedule a 60-minute discovery and solution overview session on April 1.

Confirmed Details

- ✓ **Existing Recast customer** — currently licensed for Right Click Tools
- ✓ **~2,000 active employees** — excludes contractors and consultants
- ✓ **Dual-device users in call center** — home device + office device per user
- ✓ **Application Workspace webinar reviewed** — both Gerard and Matias watched the recording
- ✓ **Next session confirmed** — April 1, 2026 at 9:30 AM ET (60 minutes)

DISCUSSION SUMMARY

Migration Direction — SCCM to Intune

- Greenshield has received a directive to migrate as much as possible from ConfigMgr (SCCM) to Microsoft Intune
- This scope recently expanded — originally focused on patching only, now includes all application delivery
- Greenshield is also engaging Microsoft on AutoPatch for OS/patch management through Intune co-management
- Timeline for migration is to be determined — the team is still assessing what is possible

Citrix Exit & AVD Expansion

- Greenshield currently uses Citrix for certain workloads and has Azure Virtual Desktop (AVD) in the environment
- Planning to move away from Citrix over the next couple of years — conversations expected to begin in April 2026
- Will be evaluating application virtualization solutions to support the Citrix → AVD transition

Mac Management

- Mac endpoints are managed separately through Jamf — not tied to Citrix
- Interest in whether Application Workspace can provide centralized delivery across both Windows (Intune) and macOS (Jamf) from a single console

Application Packaging Pain Points

- Repetitive packaging cycles for routine updates (e.g., Google Chrome) consume significant effort
- Non-critical applications often go without updates until users escalate — team lacks capacity for proactive lifecycle management
- Interest in the Application Workspace catalog to offload routine packaging and free up engineering time for strategic work

Application Workspace Fit

- Recast confirmed Application Workspace works across multiple environments — SCCM, Intune, Citrix, AVD, and macOS
- Licensing is per-user, which accommodates multi-device scenarios (e.g., call center staff with two devices per user)
- As a current Right Click Tools customer, Greenshield would upgrade to Application Workspace as an add-on to their existing investment

Partnership Model

- System Center Dudes (Benoit Lecours) joined as Recast's preferred implementation and resell partner
- Greenshield noted they are actively looking for a partner to help with the SCCM → Intune migration and related efforts
- Implementation approach follows a train-the-trainer model to ensure Greenshield's team is self-sufficient

KEY DECISIONS & AGREEMENTS

- ✓ **Discovery & solution overview session scheduled** — April 1, 2026, 9:30–10:30 AM ET
- ✓ **Format agreed** — First 20 minutes: Greenshield walks through current environment and use cases. Remaining time: Recast presents a customized Application Workspace overview mapped to Greenshield's environment
- ✓ **Scott Stephens added** — to be included on the April 1 invite
- ✓ **Session will be interactive** — live demonstration, not a static presentation; questions encouraged throughout

ACTION ITEMS

Action	Owner	Timing	Status
Send calendar invite for April 1 session with agenda and attendee list	Recast	Week of Mar 16	✓ Complete
Add Scott Stephens to the April 1 invite	Greenshield (Gerard)	Week of Mar 16	✓ Complete
Prepare environment walkthrough — platforms, deployment methods, migration status, and key use cases	Greenshield	Before Apr 1	In Progress
Prepare customized Application Workspace demo tailored to Greenshield's multi-platform environment	Recast	Before Apr 1	In Progress
Conduct full account review — current entitlements and licensing	Recast	Before Apr 1	In Progress

YOUR CURRENT ENVIRONMENT (Preliminary — To Be Validated April 1)

Core Infrastructure

- **ConfigMgr / SCCM** — Current primary platform for on-premises Windows device and application management
- **Microsoft Intune** — Migration target for cloud-managed endpoints; expanding scope beyond patching to full application delivery
- **Citrix** — In use for certain workloads; exit planned over the next 1–2 years with conversations beginning April 2026
- **Azure Virtual Desktop (AVD)** — Currently in the environment; expected to grow as Citrix workloads transition
- **Jamf** — Mac endpoint management; operates independently from Citrix

Application Delivery & Configuration

- **Current packaging workflow** — Manual process: identify new version → package → test → deploy per platform
- **Microsoft AutoPatch** — Engaged with Microsoft to handle OS patching through Intune co-management
- **Application updates** — Routine third-party updates (e.g., Chrome) are reactive; updates deferred until user escalation due to workload constraints
- **Application virtualization** — Evaluating solutions to support Citrix → AVD transition

Organizational Context

- **~2,000 active employees** — Additional contractors and consultants not included in this count
- **Call center operations** — Users typically assigned two devices (home + office)
- **Recast Right Click Tools** — Existing customer; actively leveraging within SCCM environment
- **Migration timeline TBD** — Team is still assessing scope and feasibility for the SCCM → Intune move

PROPOSED AGENDA — APRIL 1, 2026 | 9:30–10:30 AM ET

Confirmed Attendees

Attendee	Organization
Gerard Maclellan	Greenshield
Matias Adan	Greenshield
Scott Stephens	Greenshield
Aaron Adsit	Recast Software
John Yoakum	Recast Software
Karie Hamilton	Recast Software
Dan Buchman	Recast Software
Benoit Lecours	System Center Dudes

Agenda

Time	Topic	Led By
9:30–9:35	Introductions & Recap — Quick intros for new attendees; recap of March 16 discussion	Both teams
9:35–9:55	Greenshield Environment Overview — Current deployment methods (SCCM, Intune, Jamf, Citrix/AVD), operational workflows, challenges, and migration plans (SCCM → Intune, Citrix → AVD)	Greenshield
9:55–10:20	Recast Solution Overview & Demo — Overview of current Right Click Tools capabilities in Greenshield's environment; introduction to Application Workspace; centralized catalog and deployment across SCCM, Intune, and hybrid environments	Recast
10:20–10:30	Q&A; and Next Steps — Additional technical questions; discuss potential follow-up sessions or evaluation path	Both teams
